

### Makes floors safer WET than dry

Grip Guard is a unique and remarkable floor treatment that microscopically modifies the floor surface to dramatically increase slip resistance.

### Floor surfaces are tested to ensure they meet safety standards

Grip Guard operators utilize an ASM slip meter to measure the co-efficient of friction (slip resistance) of all floor surfaces prior to, and after treatment, to ensure that legal requirements are met. Results are documented on the Grip Guard warranty.

### Treatments won't disrupt business procedures

Grip Guard treatment can usually be carried out during business hours with little or no disruption to normal business procedures or, if necessary, arranged outside of business hours. The floor surface is safe to walk on immediately after treatment is completed.

### No visible change to floor surfaces

The Grip Guard treatment is invisible to the naked eye yet dramatically increases slip resistance creating a safe floor surface for all pedestrians and vehicles. The treatment permanently modifies the floor surface - it is not a coating and therefore will not wear off.

This allows architects, designers, builders and business owners/managers the freedom to select the surface that looks best, and then specify Grip Guard to ensure it is slip resistant.

### No special maintenance

Grip Guard requires no special maintenance. Unlike floor coatings, mats, and adhesive strips that require regular upkeep (or replacement), floors treated with Grip Guard can be cleaned as per normal.

### Fully trained floor safety experts

Grip Guard operators undergo extensive floor training programs and are qualified to provide expert floor safety advice as well as the most advanced floor safety treatments.

### Warranty of Slip Resistance

Grip Guard provides clients with a warranty that documents the slip resistance of the floor surface both prior to and following Grip Guard treatment.

The warranty also specifies the area/s treated as well as methods undertaken. The Grip Guard warranty enables property owners to document that floor safety issues have been addressed.
